Priya Shah

DevOps Engineer

priya.shah@example.com | +1 206 555 0103
Seattle, Washington, United States

PROFESSIONAL SUMMARY

DevOps engineer with eleven years of infrastructure and platform experience supporting business-critical SaaS workloads. Specializes in Kubernetes, infrastructure as code and delivery automation. Builds reliable on-call practices, cost visibility and recoverable systems while working closely with application teams and security reviewers.

CORE SKILLS

AWS / Kubernetes / Terraform / Docker / Linux / Python / Bash / GitHub Actions / Prometheus / Grafana / Incident response / Site reliability engineering

PROFESSIONAL EXPERIENCE

DevOps Engineer | Harborgrid Platform Works

Apr 2022 - Present | Seattle, Washington | Full-time

- Operated 14 Kubernetes clusters serving 70 application services with a measured 99.95% monthly availability target.
- Standardized Terraform modules and drift checks across 26 cloud accounts, cutting environment provisioning from three days to 40 minutes.
- Introduced progressive delivery and automated rollback gates; reduced median recovery time from 47 minutes to 19 minutes.
- Optimized compute reservations and storage retention, lowering annualized infrastructure spend by 22% without reducing service capacity.

Platform Engineer | Sablecloud Commerce

Jul 2018 - Mar 2022 | Seattle, Washington | Full-time

- Migrated 32 services from manually configured virtual machines to containerized deployments.
- Built CI pipelines with image signing, vulnerability checks and integration-test stages.
- Created SLO dashboards and runbooks for the five most frequent incident classes.
- Coordinated quarterly backup-restore exercises and demonstrated recovery of a 1.2 TB database within the four-hour objective.

Linux Systems Administrator | Juniperline Managed Systems

Aug 2015 - Jun 2018 | Portland, Oregon | Full-time

- Administered 120 Linux servers, patch schedules, monitoring alerts and access reviews.
- Automated user provisioning and certificate rotation using Python and shell scripts.
- Maintained asset records and documented escalation procedures for a rotating support team.

Priya Shah

DevOps Engineer | Qualifications and selected work

EDUCATION

Bachelor of Science in Information Systems

Fictional Rainford Institute of Technology

Sep 2011 - Jun 2015 | Grade: 3.6 / 4.0

PROJECTS

Recoverable Cluster Blueprint

Platform lead | May 2023 - Jan 2024

Created reproducible cluster configuration, encrypted backup policies and restore drills. Tested recovery of an isolated staging environment in 54 minutes.

Methods / tools: Kubernetes, Terraform, AWS

https://projects.example.com/priya-shah/project-1

Developer Preview Environments

Engineer | Apr 2020 - Feb 2021

Provisioned isolated review environments per pull request with automated cleanup and cost tagging; shortened feedback cycles by 35%.

Methods / tools: Docker, GitHub Actions, Python

https://projects.example.com/priya-shah/project-2

CERTIFICATIONS

Container Operations Specialist

Fictional Platform Certification Guild

Issued: May 2024 | Expires: May 2027 | Credential ID: TEST-03-01

Cloud Infrastructure Professional

Fictional Cloud Skills Council

Issued: Aug 2023 | Expires: Aug 2026 | Credential ID: TEST-03-02

LANGUAGES

English (Fluent) / Gujarati (Native) / Hindi (Fluent)

Priya Shah

DevOps Engineer | Leadership and practice

REGIONAL FAILOVER EXERCISE

Case study | Jun 2024

Actions and approach

Planned a controlled failover for order APIs, including DNS changes, data replication checks and a rollback decision tree. Coordinated application owners and support staff during a 90-minute test window.

Measured outcome

Achieved a 12-minute recovery time and validated 99.98% of synthetic test records; documented the remaining replication edge case and closed it before the next drill.

ALERT QUALITY PROGRAM

Case study | Feb 2025

Actions and approach

Reviewed six months of paging history and separated user-impact signals from informational events. Added burn-rate alerts and routing by service ownership.

Measured outcome

Reduced overnight nonactionable pages by 46% and improved primary-on-call acknowledgment time from nine minutes to four.

PROFESSIONAL CONTRIBUTIONS

- Facilitator for monthly blameless incident reviews and a quarterly infrastructure learning day.
- Mentored three engineers through their first production on-call rotations.

PROFESSIONAL FOCUS

Current practice priorities: Prometheus, Grafana, Incident response, Site reliability engineering. Examples above reflect work completed with the listed employers and are included to show practical scope and methods.
